1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 3 and 4, drawn to a cable stripper having a calibrating screw.
- II. Claims 5-7, drawn to a cable stripper having chamfered, v-shaped edges.
- III. Claims 8-10, drawn to a cable stripper having a locking means.
- IV. Claim 11, drawn to a cable stripper having a gripping means.
- V. Claims 12 and 13, drawn to a cable stripper having angled handles.
- VI. Claims 14-18, drawn to a cable stripper having specifically sized openings.

2. Claims 1 and 2 will be examined with the elected invention. Claims 1 and 2 link the inventions of groups I-VI. The restriction requirement of the linked inventions is subject to the nonallowance of the linking claims, claims 1 and 2. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Art Unit: 3724

3. Inventions of groups I-VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, the cable stripper having a calibrating screw of group I could be used with U-shaped cutting edges, as opposed to the V-shaped cutting edges of the cable stripper of group II. Conversely, the cable stripper having chamfered, v-shaped edges of group II could be employed with a cam-based calibration mechanism, unlike the screw-based calibration mechanism of group I. See MPEP § 806.05(d).

4. There is an excessive burden on the office to examine all of these inventions together, as shown by their search. See MPEP 808.02(C). For example, the search for group I would be in class ~~36~~ 81 and require text limitations such as "screw". The search for group II would not be as above, but instead would be in class 30, subclass 357. The search for group III would not be as above, but instead would require a search in class 30, subclass 262. The other groups also have unique searches.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ken Peterson whose telephone number is 703-308-2186.
